

NucleoSpin® Plasmid

This kit is designed for the rapid small scale preparation of sequencing grade plasmid DNA. Up to 10 ml of bacterial overnight-culture yield up to 40µg of highly-pure plasmid DNA.

NucleoBond® Xtra Midi/Maxi Plus)

The new generation of anion exchangers for transfection grade plasmid Midi and Maxi preps! The optimized matrix, buffers, and column geometry result in up to 60% reduced prep times and more than 100% increased yields (compared to other commercially available plasmid Midi and Maxi kits) ...

NucleoBond® Xtra Midi/Maxi (Plus) EF

... now available to purify even endotoxin free (EF) plasmid DNA.

NucleoSpinExtract II

This two-in-one kit for PCR clean-up and gel extraction gives you highest recoveries even for very small fragments (> 65 bp) The small elution volume of 15 µl results in highly concentrated DNA.

NucleoSpin® Tissue

This all-round kit is designed for the isolation of genomic DNA from a wide range of different starting materials (cells, tissue, forensic & clinical samples). The highly sensitive membrane allows reliable purification of even trace amounts of DNA.

NucleoSpin® RNA II

Recommended for the isolation of total RNA from cells and tissues the kit is truly complete (including recombinant DNase I and shredders for homogenization of the lysate). RNA of high purity and stability is purified for a favorable price per prep.

NucleoSpin® Plasmid

These kits are comparable to NucleoSpin® Tissue and NucleoSpin® RNA II respectively but include unique binding columns specially designed for Xtra Small samples, allowing an Xtra Small elution volume resulting in xtra high concentration.

The MN top sellers now available in a tempting promotion!

Order one of MN's Classics and receive a 20% discount...

with irresistible Haribo Gummi Bears (tub with 72 mini bags) on top of it!
