Ergo-Mate

Ergonomic Pipetting System

For comfortable pipetting at a convenient angle

Photo illustrates the perfect solution to ergonomic and accurate pipetting.

- ISO 8655 recommends, when pipetting, to touch off samples on wall of receiving vessels, especially with small volumes. Ergo-Mate removes the need to hold the plate at any specific angle and allows for safe dispensing, resulting in easier, safer, and more precise pipetting.
- Ergonomic angle for proper positioning of wrist and hand for comfortable pipetting.
- When reversed, creates an ideal aerosol barrier for use in hoods or on bench top surfaces.
- Ideal for safe transporting of plates.
- Can be reversed and used for flat surface pipetting or as an incubation station with lid.

Innovating for Health

Product Description	Part No.	List Price
